

**ABSTRACT**

Please insert the following Abstract:

--The invention relates to multimedia page editing via a terminal. A server supplies multimedia pages to the terminal in the form of object arrangement commands for objects identified by parameters. A method according to the invention comprises a preliminary step wherein the server transmits all or part of the object-related parameters as well as a store command, whereby the parameters are stored in a terminal memory; and a main step wherein the server transmits a simple parameter retrieval command for editing at least one multimedia page in which the above-mentioned object appears.--
